

TriZetto® NetworX Modeler Analytics™

Turn Analysis into Action with a Business Intelligence Application designed for Contract Negotiations

With TriZetto NetworX Modeler Analytics, you can:

- Obtain interactive, ad-hoc reports based on data from the NetworX Modeler database
- Conduct rapid “what-if” analyses during contract negotiations
- Increase the accuracy, efficiency and speed of negotiations

As payers respond to the challenges posed by healthcare reform legislation, they are seeking new ways to increase efficiency, reduce administrative costs and improve the management of medical expenses. One area that merits scrutiny is provider contracting, which traditionally has involved guesswork about the potential financial implications of proposed new contractual rates and terms.

As the industry transitions to ICD-10 code sets and responds to market demand for new reimbursement methodologies such as pay for performance and value-based reimbursement, the need for improved decision-making in provider contracting is reaching the critical stage.

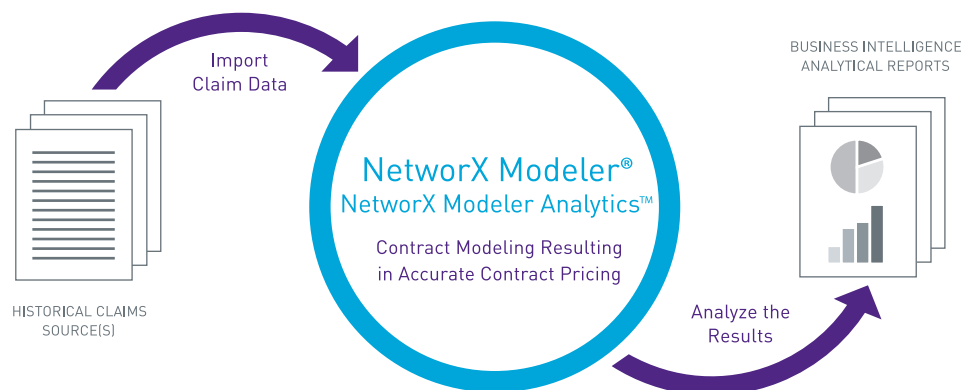

TriZetto NetworX Modeler Analytics delivers the information you need in order to negotiate provider contracts—regardless of complexity—intelligently and cost-effectively.

NetworX Modeler Analytics is sold as an add-on to the TriZetto NetworX Modeler® application, which enables payers to quickly model the terms of contracts and see the financial impact of contract terms before agreements are signed. NetworX Modeler Analytics provides customized, actionable reports and sophisticated business intelligence that can help improve forecasts and decision-making during contract negotiations.

Powered by QlikTech’s business intelligence solution, QlikView, NetworX Modeler Analytics enables users to gain new business insights through improved access to claims data and contract-pricing information. QlikTech is a business intelligence solution provider focused on simplifying decision-making for business users across organizations.

ICD-10-ready network management solutions from TriZetto.

NetworX Modeler Analytics is the newest component of TriZetto’s NetworX Suite® of products, which also includes the NetworX Modeler application and TriZetto’s patented NetworX Pricer® application. The NetworX Modeler application quickly delivers highly accurate estimates of the financial impact of proposed new contractual rates and terms, regardless of complexity. The NetworX Pricer application is a production-proven, ICD-10-ready pricing engine that automates the pricing of claims, regardless of the complexity of applicable contract terms. Combined, these solutions provide end-to-end capabilities for network management, from contract modeling and analysis to claims pricing capabilities and together enable payers to achieve the vision of Integrated Healthcare Management.

NetworX Modeler Analytics, integrated with NetworX Modeler, allows contract managers to use business intelligence and reporting to make financially sound decisions during contract negotiations.

TriZetto NetworX Modeler Analytics is integrated with NetworX Modeler. The application provides business intelligence and analytical reports that help contract managers:

- Compare contract proposals with respect to projected spend and make informed decisions faster
- Interact with the data to get dynamic views of the results and analyses
- Negotiate mutually agreeable—and carefully analyzed—contracts in less time

TriZetto® NetworX Modeler Analytics™, integrated with NetworX Modeler®, can deliver greater accuracy, efficiency and speed in provider contract negotiations. This innovative new solution provides in-depth analyses and dynamic reports that can help you improve business decision-making and financial results. Negotiate win-win contracts with business insight when and where you need it.

NetworX Modeler Analytics enables contract managers to develop customized, actionable reports so that they can move from “back-of-the-envelope” analyses to reliable, accurate models.

Payers today are negotiating highly complex contracts and developing new reimbursement models that require in-depth analysis—before agreements are signed. The NetworX Modeler Analytics solution provides the information you need, when you need it, to make informed decisions about proposed new contracts.

Product features include:

- Business intelligence tools powered by QlikView
- Interactive, ad-hoc reporting capabilities
- Deep comparative analysis, slice-and-dice functionality

TriZetto Advantage Services™: Extending the advantages of NetworX Modeler Analytics.

With a history of more than 50 NetworX implementations, the TriZetto Advantage Services team stands ready to help you take full advantage of all the features that the NetworX Modeler application has to offer. A key focus of the Services team is knowledge transfer—helping ensure that your staff gains product-specific knowledge and skills with which to manage and operate NetworX applications effectively and efficiently. TriZetto Advantage Services also can help support your transition to ICD-10 with ease and with minimal financial and operational risk.

Powering Integrated Healthcare Management®

Integrated Healthcare Management is the systematic application of processes and shared information to optimize the coordination of benefits and care for the healthcare consumer. It is fueled by the convergence of core benefit administration, care management, and constituent engagement. The intersection of these competencies enables payers to leverage data to more systematically stratify, engage and reward constituents and personalize interactions with them in order to motivate healthy behaviors, increase the effectiveness of treatments, reduce the cost of care and drive better results. Only TriZetto has invested in a long-term architectural approach to bring core, care and constituent capabilities together and enable payers to achieve the vision of Integrated Healthcare Management.
